                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PubMed=11773079; DOI=10.1074/jbc.M111486200; PubMed=11773079; DOI=10.1074/jbc.M111486200; Giraud S., Bienvenu F., Avril S., Gascan H., Heery D.M., Coqueret O.; Giraud S., Bienvenu F., Avril S., Gascan H., Heery D.M., Coqueret O.; Trunctional interaction of STAT3 transcription factor with the coactivator NcoA/SRC1a."; J. Biol. Chem. 277:8004-8011(2002).

-I. FUNCTION: Transcription factor that binds to the interleukin-6 (IL-6) responsive elements identified in the promoters of various acute-phase protein genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        "ISOUGH-P40763-2; Sequence=VSP_010474;
-1-TISSUE SPECIFICITY: Heart, brain, placenta, lung, liver, skeletal muscle, kidney and pancreas.
-1- FTM: Tyrosine phosphorylated in response to IL-6, IL-11, CNTF, LIF, CSF-1, EGF, PDGF, IFN-alpha and OSM. Serine phosphorylation is important for the formation of stable DNA-binding STAT3 homodimers and maximal transcriptional activity.
-1- SIMILARITY: Belongs to the transcription factor STAT family.
-1- SIMILARITY: Contains 1 SH2 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MEDLINE-95215843; PubMed-7701321; Zhang X., Blenis J., Li H.-C., Schindler C., Chen-Kiang S.; Requirement of serine phosphorylation for formation of STAT-promoter complexes.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   -!- PATHWAY: Involved in the gpl30-mediated signaling pathway.
-!- SUBUNIT: Forms a homodimer or a heterodimer with a related family member (at least STATI). Interacts with NCOAI.
-!- SUBCELLULAR LOCATION: Cytoplasmic; translocated into the nucleus in response to phosphorylation.
                                                                                                                                                                                                                                                                                                                                                                                                      Della Pietra L., Bressan A., Pezzotti A.R., Serlupi-Crescenzi O., Submitted (OCT-1997) to the EMBL/GenBank/DDBJ databases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 . .; IDA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (IL-6)-responsive elements identified in the promoters of various acute-phase protein genes. STAT3B interacts with the N-terminal part of JUN to activate such promoters in a cooperative way.

-!- PATHWAY: Involved in the gpl30-mediated signaling pathway.
-!- SUBUNIT: Forms a homodimer or a heterodimer with a related family member (at least STAT1). Interacts with NCOA1 (By similarity).
-!- SUBCELLUAR LOCATION: Cytoplasmic; translocated into the nucleus in response to phosphorylation.

                                                                                                                                                                                                                                                                                                                                                                                                 1. .25
//note= "Stat3-c-Jun interaction region 1; corresponds to 130-154 position of Stat3 protein"
213. .229
//note= "Stat3-c-Jun interaction region 2; corresponds to 342-358 position of Stat3 protein"
by replacing Leu 148 with Ala in Stat3 protein. The invention relates to methods for identifying interacting regions of transcription factors and methods for identifying agents which modulates the interaction between a transcription factor such as c-Jun and a Stat protein such as Stat-1 and Stat-3, useful for modulating gene transcription e.g., cellular transformation. These identifying agents are used in the treatment of dysproliferative diseases and also for treating cancer and psoriasis. A Stat protein comprises the N-terminal domain, coiled-coil domain, bNA binding domain, linker domain, SH2 domain and transactivation domain
                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mouse, Stat3 protein, transcription factor, c-Jun, gene transcription, cellular transformation, dysproliferative disease, cancer, psoriasis,

This Stat3 fragment showed strong binding to c-Jun protein in the cell extract. The invention relates to methods for identifying interacting regions of transcription factors and methods for identifying agents which modulates the interaction between a transcription factor such as c-Jun and a Stat protein such as Stat-1 and Stat-3, useful for modulating gene transcription e.g., cellular transformation. These identifying agents are used in the treatment of dysproliferative diseases and also for treating cancer and psoriasis. A Stat protein comprises the N-terminal domain, coiled-coil domain, DNA binding domain, linker domain, SH2 domain and transactivation domain

                                                                                          The present sequence is mouse Stat3 protein fragment containing 107-358 amino acids of Stat3 protein. This Stat3 fragment showed strong binding to c-Jun protein in the cell extract. The invention relates to methods for identifying interacting regions of transcription factors and methods for identifying agents which modulates the interaction between a transcription factor such as c-Jun and a Stat protein such as Stat-1 and Stat-3, useful for modulating gene transcription e.g., cellular transformation. These identifying agents are used in the treatment of typroliferative diseases and also for treating cancer and psoriaeis. A Stat protein comprises the N-terminal domain, colled-coil domain, DNA binding domain, linker domain, SH2 domain and transactivation domain
                                                                                                                                                                                                                                                                                                                     9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Signal transducer and activator of transcription; STAT; 198f6; Stat3; receptor recognition factor; transcription factor; cellular debilitation; derangement; dysfunction; interferon-gamma.
                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is mouse Stat3 protein fragment containing 107-377 amino acids of Stat3 protein. This Stat3 fragment showed strong binding to c-Jun protein in the cell extract. The invention relates to methods for identifying interacting regions of transcription factors and methods transcription factor such as c-Jun and a Stat protein such as Stat-1 and Stat-3, useful for modulating gene transcription e.g., cellular transformation. These identifying agents are used in the treatment of Stat protein comprises and also for transcription e.g., cellular Stat protein comprises the N-terminal domain, coiled-coil domain, DNA binding domain, linker domain, SH2 domain and transactivation domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ACIGGPPNICLDRLENWITSLAESQLQTRQQIKKLEELQQKVSYKGDPIVQHRPMLEERI 180

                                                                                                                                                                                                                                                                                                                                                                       STAT4 (AAW03176) serves a dual purpose, i.e. signal transduction from ligand-activated receptor kinase complexes followed by nuclear translocation and DNA binding to activate transcription. Recombinant STAT4 can be obtd. using cDNA clone 19sf6 (AAT31278) obtd. from splenic/thymic cells. STAT4 includes a DNA-binding domain (see also AAW03167) capable of both receptor recognition and message delivery vi DNA binding in a receptor-ligand specific manner. STAT proteins and that antagonists used to inhibit STAT-mediated signal transduction and activation of transcription
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ACIGGPPNICLDRLENWITSLAESQLQTRQQIKKLEELQQKVSYKGDPIVQHRPMLEERI

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                            A fragment encoding the human Stat91 protein was used to screen a murine thymus and splean cDNA for homologous proteins. A highly homologous gene (given in AAQ89338) was isolated that encoded a 91 kDa protein (AAR72080) (Stat1) that was responsive to interferon-gamma. Using a fragment of the mouse gene as probe, 2 additional members of the 113-91 family of receptor recognition factor proteins were isolated. The 2 genes (AAQ89339 + Ceptor recognition factor proteins were isolated. The 2 genes (AAQ89339 + 1381 and 138f1 and 138f6 and encoded proteins termed stat4 (AAR72081) and Stat3 (AAR72082), respectively. (Updated on 25-MAR-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            121 ACIGGPPNICLDRLENWITSLAESQLQTRQQIKKLEELQQKVSYKGDPIVQHRPWLEERI 180
                                                                                                                                                                                                                                                                                                               containing 130-358 amino acids of Stati protein. This mutant is obtained by replacing Val 151 with Ala in Stati protein. The invention relates to methods for identifying interacting regions of transcription factors and methods for identifying speirs which modulates the interaction between a transcription factor such as c-Jun and a Stat protein such as Stat-1 and Stat-3, useful for modulating gene transcription e.g., cellular transformation. These identifying agents are used in the treatment of dysproliferative diseases and also for treating cancer and psoriasis. A

The invention relates to a method of modulating angiogenesis and immune response. Method involves administering to an individual a compound that modulate the activity of signal transducer and activator of transcription 3 (Stat3). Modulating angiogenesis is useful for treating or preventing hypoxic or ischaemic condition or disorder which is the result of stroke, ischaemia, coronary atherosclerosis, myocardial infarction, inflammation, tissue ischaemia in the lower extremities, infarction, inflammation, tissue ischaemia in the lower extremities, infarction, suffocation, shock, offoroic obstructive pulmonary disease, choking, asphyxia, hypoglycaemia, cpilepsy, emphysema, adult respiratory distress syndrome, cardiac arrest nitrogen necrosis, proliferative angiopathy e.g. diabetic microangiopathy with neovascularisation. Suppressing an immune response is useful for ameliorating a symptom of an autoimmune disease such as systemic lupus erythematosus, multiple scleroderma, polymyositis, chronic active hepatitis, mixed connective tissue disease, primary bilary cirrhosis, pernicious anaemia, autoimmune hyroiditis, idiopathic Addison's disease, vitiligo, gluten-sensitive enteropathy, autoimmune neutropenia, myasthenia gravis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Modulating angiogenesis and an immune response in an individual, for treating a hypoxic or ischemic condition, comprises administering a compound that modulates the activity of a signal transducer and activator
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      idiopathic thrombocycopenia purpura, Grave's disease, Goodpasture's disease, theumatoid arthritis, cirrhosis, pemphigus vulgaris, autoimmune infertility, bullous pemphigoid, discoid lupus, ulcerative colitis and dense deposit disease. The method is useful in preventing or treating specific proliferative and oncogenic disease which includes sarcomas and carcinomas e.g., bladder carcinoma, colon carcinoma, chronic leukaemia, fibrosarcoma, liposarcoma, degenerative disorders, growth deficiency, hypoproliferative disorders, physical trauma, lesions and wounds. The method is also used in gene therapy. The present sequence is human
hypoxia, stroke, angiogenesis, myocardial infarction, hypoglycaemia; inflammation, chronic obstructive pulmonary disease, cardiac arrest; insulin dependent diabetes mellitus; emphysema; trauma; soleroderma; shock, chronic artive hepatitis; adult respiratory distress syndrome; nitrogen necrosis; proliferative angiopathy; autoimmune thyroiditis; Sjogren's syndrome; multiple sclerosis; Addison's disease; epilepsy; polymyositis; rheumatoid arthritis; autoimmune infertility, anaemia; proliferative disease; Grave's disease; ulcerative colitis; sarcoma; carcinoma; degenerative disease; gene therapy; growth deficiency; cirrhosis; hypoproliferative disorder; lesion; Statbeta.

conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic selected from (I). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vascopastic ischaemia) by measuring expression levels of particular genes (AB199202 to AB199912, encoding the protein sequences in ABB573702 to ABB57374) or by determining the protein sequences in ABB573702 to ABB57374) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition.improving drugs or indicator when screening diseases. ABB199913 and AB199914 represent primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention

                                                                                                                                                                                                      ₽
```

tiseue ischaemic condition or disorder which is the result of stroke, ischaemia, coronary atherosclerosis, myocardial infarction, inflammation, tiseua ischaemia in the lower extremities, infarction, trauma, vascular occlusion, prenatal or postnatal oxygen deprivation, suffocation, shock, chronic obstructive pulmonary disease, choking, asphyxia, hypoglyaemia, children adult respiratory distress syndrome, cardiac arrest, nitrogen necrosis, proliferative angiopathy e.g. diabetic microangiopathy with neovascularisation. Suppressing an immune response is useful for ameliorating a symptom of an autoimmune disease such as systemic lupus erythematosus, multiple sclerosis, insulin dependent diabetes mellitus, circhematosus, multiple sclerosis, insulin dependent diabetes mellitus, sysparen's syndrome, scleroderma, polymyositis, chronic active hepatitis, mixed connective tissue disease, primary biliary circhosis, pernicious maemia, autoimmune thyroiditis, idiopathic Addison's disease, viciligo, gluten-sensitive enteropathy, autoimmune neutropenia, myasthenia gravis, idiopathic thrombocytopenia purpura, Grave's disease, coodpasture's disease, rheumatoid arthritis, circhosis, pemphigus vulgaris, autoimmune infertility, bullous pemphigoid, discoid lupus, ulcerative colitis and carcinomas e.g., bladder carcinoma, colon carcinoma, chronic leukaemia, fibrosarcoma, liposarcoma, degenerative disease which includes sarcomas and carcinoma, liposarcoma, degenerative diseorders, growth deficiency, hypoproliferative disorders, physical trauma, lesions and wounds. The present sequence is human Stat3 \$X\$

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a method of modulating angiogenesis and immune response. Method involves administering to an individual a compound that modulate the activity of signal transducer and activator of transcription
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; Page 83-85; 94pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence represents a mouse acute phase response factor (APRF), a transcription factor related to signal transmission of interleukin-6 (IL-6). The protein is encoded by a cDNA, isolated from a mouse liver cDNA library using a polymerase chain reaction product (amplified using primers derived from an IL-6-treated mouse liver peptide) as a probe. AFRF-inhibitors, e.g. antibodies, antisense oligonucleotides or ribozymes, may be used to treat diseases induced by IL-6, e.g. inflammatory disease, leukemia, cancer, osteoclasia, pulmonary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 GNNQSVTRQKMQQLEQMLTALDQMRRSIVSELAGLLSAMEYVQKTLTDEELADWKRRPEI 120

The present sequence represents a predominant allelic variant of human Signal Transducer and Activator of Transcription 3 (STAT3) protein, an intracellular transcription factor which mediates IL-6 signals. The encoding sequence differs from the original published human STAT3 gene sequence (Akira et al., 1994). Host cells comprising a recombinant STAT3 protein can be used for the recombinant expression of the variant. STAT3 protein is useful as a medicament or pharmaceutical composition for treatment of autoimmune or inflammatory diseases

                                                                                 8
                                                                                                          셤
                                                                                                                                                                                                               The present invention relates to a crystal of an N-terminal fragment of a signal transducer and activator of transcription (STAT) protein. The crystal effectively diffracts X-rays, allowing the determination of the atomic coordinates of the N-terminal domain to a resolution of greater than S.O Angstroms. The present sequence is the N-terminal domain of the murine STAT 3 protein. The N-terminal domain enables STAT dimers to interact and bind DNA cooperatively, a mechanism important for gene activation. The crystals are useful in drug screening and development by selecting a potential drug by performing rational drug design with the 3-dimensional structure determined for the crystal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NHPTAAVVTEKQQMLEQHLQDVRKRVQDLEQKMKVVENLQDDFDFNYKTLKSQGDMQDLN 189
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     249

The invention relates to methods for detecting compounds that bind to signal transducer and activator of transcription (STAT) proteins for the discovery and development of new drug compounds based on the structural properties of the protein crystal. The methods include: identifying a compound that binds to the N-terminal domain of a STAT protein.

If identifying a compound that enhances or diminishes the binding of the dimeric STAT proteins to each other and/or their nucleic acid binding site, or identifying a compound that enhances or diminishes the ability of STAT protein dimers to induce the expression of a gene operably under the control of a promoter concaining at least two adjacent weak binding sites for STAT protein dimers. The methods are used for identifying new drugs. An antagonist of STAT verminal dimeric interactions that inhibits the binding of the STAT dimers to adjacent weak binding sites on a promoter of a gene, could be useful as drugs in the treatment of diseases, e.g. inflammation, allergy, asthma and leukamias. On the other hand, an agonist of N-terminal dimeric interactions between STAT dimers,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      can be used as drugs in the treatment of diseases e.g. anaemia, neutropaenia, thrombocytopaenia, cancer, obesity, viral diseases and growth retardation. The present sequence is murine STAT3 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              98.6%; Score 1156; DB 5; Length 770;

Sequence 30, Application US/09387418A

Patent No. 631572

GRNERAL INFORMATION:
APPLICANT: Zhang, Xiaokui
APPLICANT: Zhang, Xiaokui
APPLICANT: Mrzeszczynaka, Melissa H
APPLICANT: Darnell Jr., James E
ITILE OF INVENTION: INTERACTIONS
FILE REFERENCE: 600-1-23
CURRENT APPLICATION NUMBER: US/09/387,418A
CURRENT APPLICATION NUMBER: US/09/387,418A
CURRENT PILING DATE: 1999-08-31
NUMBER OF SEQ ID NOS: 43
SOFTWARE: Patentin Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 GNNQSVTRQKMQQLEQMLTALDQMRRSIVSELAGLLSAMEYVQKTLTDEELADWKRRPEI 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ଚ
                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 12, Application US/08369796

Patent No. 5716622

GENERAL INFORMATION:
APPLICANT: James E. Darnell, Jr.
APPLICANT: Curt M. Horvath
APPLICANT: Zhong Wen
APPLICANT: Though Wen
APPLICANT: The OF INVENTION: FUNCTIONALLY ACTIVE REGIONS OF SIGNAL
TITLE OF INVENTION: TRANSDUCER AND ACTIVATOR OF TRANSCRIPTION (STAT) PROTEINS
NUMBER OF SEQUENCES: 39
CORRESPONDENCE ADDRESS:
